

Wing Harness Line:

Webbing loops next to the strut Power Handles offer quick and easy installation of the Harness Line. Harness Line to Wing installation:

1. Connect the pigtail to the rear webbing loop on the strut with a loop-to-loop connection.
2. Connect the Harness Line to the front webbing loop on the strut with a loop-to-loop connection.
3. Connect the loose end of the Harness Line with the pigtail using a larks head connection over the knot.
4. The length of the harness line can be adjusted by moving the knot position.

The harness line is slim and lightweight with an internal bungee contracting when unhooked to stay out of the way.
