

FLY_{V1}

GET FLYING!

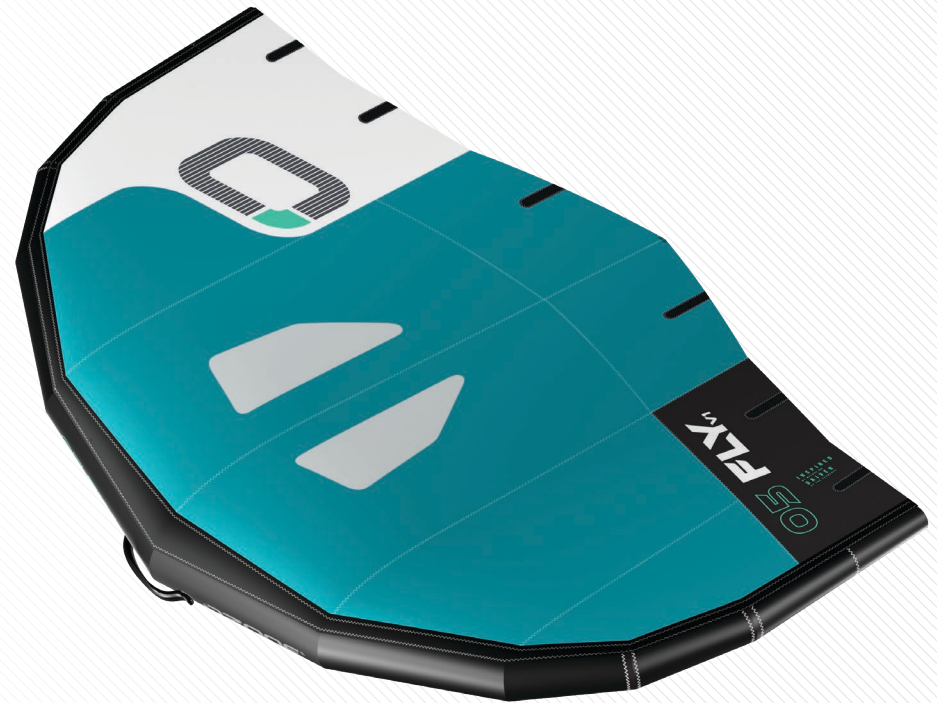

OZONE[®]

FLY_{v1}

The Fly V1 is an Intermediate wing that is also perfectly accessible for those new to this sport.

We took a modern design approach for the young and rapidly evolving wing market. Keeping things clean and simple the Fly is lightweight, quick to set up and easy to use. It is designed to make learning and advancing into wing propelled sports as easy and efficient as possible. Being lightweight and packing small the Fly is also an ideal travel wing.

- User friendly inflatable wing
- Lightweight and packs small – ideal for travel
- Compact and stable with efficient power
- Easy set up – inflate and go

GRAB AND GO!

The soft Power Handle layout is user friendly with one front handle and one back handle offering a range of hand position and trimming options. This simple 'grab and go' setup eliminates confusion multiple handle options might cause to new comers.

Sheeting in on the rear Power Handle generates a solid amount of power to get you moving, which can be fully controlled into higher wind strengths.

SMOOTH, BALANCED AND ALWAYS IN CONTROL

Tacks and jibes are easy to learn as the refined sail tension and a new panel layout keeps the Fly smooth, balanced and always in control, with the perfect amount of lift when positioning the wing over your head.

DE-POWER/SURF HANDLE

The soft De-Power/Surf Handle on the Leading Edge makes handling the wing to and from the water easy while offering full control when riding with the wing flaged out behind you.

LOW ASPECT AND COMPACT PLANFORM

A low aspect and compact planform reduces the tips from touching the water – a very handy feature when starting out through to riding waves.

FAST FLOW AIR VALVES

Fast Flow Air Valves on both the Leading Edge and Strut make inflation, deflation and packing a breeze.

PRECISELY POSITIONED WINDOWS

Ride safe and relaxed – precisely positioned windows
help to spot others around you.

ANY BOARD ANY SURFACE

The Fly V1 is suitable for riding any type of board on the water that has enough volume to support your weight. In strong wind conditions and with developed skills it is possible to ride with smaller volume hydrofoil boards. On the land or snow minimal wind is required to harness the natural energy to enjoy a different feeling of propulsion.

MODULAR LEASH

Our modular leash system can be customized for rider preference. The FLY VI ships standard with a Waist Strap pre-attached to the Leash Line.

Leash system accessories (sold separately) are a velcro Wrist Strap and a Quick Release for use with the supplied Waist Strap or for connecting the Leash Line to a harness.

WING ROLL TOP BAG

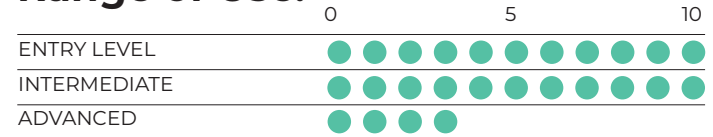

The Fly V1 bag features an easy to use roll top closure and double layer foam padding inside the shoulder strap for carrying a board and foil over the shoulder.

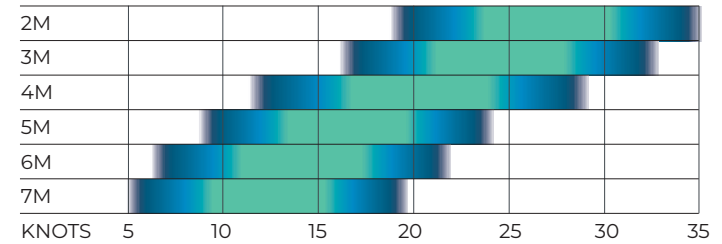

FLY_{v1}

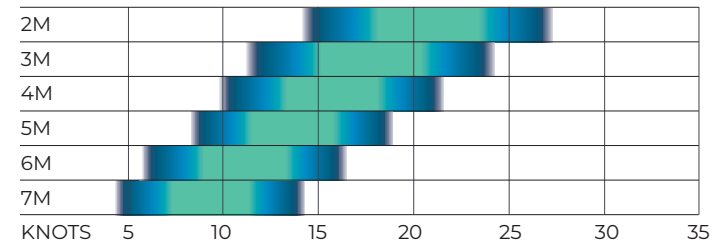

Range of Use:

Wind Range Water:

Wind Range Land/Snow:

■ SWEET SPOT ■ INTERMEDIATE TO ADVANCED ■ ADVANCED

Wind range is indicative only based on an average rider weight of 80kg.

Recommended Inflation Pressure

SIZE	LEADING EDGE	STRUT
2	10 PSI	7 PSI
3	10 PSI	7 PSI
4	8 PSI	7 PSI
5	8 PSI	7 PSI
6	7 PSI	7 PSI
7	7 PSI	7 PSI
