

# RACE V4 CONTROL SYSTEM

## THE ULTIMATE KITE RACING CONTROL SYSTEM FEATURING OUR LATEST INNOVATION - THE CLICK-IN LOOP.

### INNOVATIVE CLICK-IN LOOP

An all-new push-away quick release with an innovative one-step Click-In reload function that is incredibly intuitive. The release handle fits comfortably in the hand, it is quick and easy to activate the release by pushing the handle away. A self-positioning release mechanism locates automatically, ready to be re-loaded by simply 'clicking' in the loop. The Click-In Loop is AFNOR NF S52-503 certified.

### TWO RELEASE MODES

The Click-In Loop offers riders a choice of two release modes, the recommended Standard or the optional Expert mode.

- Standard mode offers 100% flag out in all situations by releasing the Click-In Loop or letting go of the bar when un-hooked.
- Expert mode offers 100% flag out only when the Click-In Loop is released whilst hooked in, allowing riders practicing handle passes to miss the bar without releasing the kite to flag out (not recommended).

### THREE LOOP SIZE OPTIONS

Small, Medium and Large size harness loops are available for the Click-In Loop. Choose the Small if you ride hooked in only, have a shorter arm reach or prefer the bar closer to your body. The Medium size is perfect for most riders. The Large size is designed for unhooking or riders with a longer arm reach. *The Race Control System ships standard with a Small size loop.*

### SPINNING HEAD WITH ANTI-TWIST FLAG OUT LINE

Our custom Stainless Steel Swivel Ring locates into the Click-In Loops rotating internal core. When manually turning the Spinning Head to un-twist front lines, the Flag Out Line rotates in unison with the core keeping all lines twist free.

### DOUBLE PULLEY TRIM SYSTEM

The Double Pulley system offers precise trimming on the go with ease. The long trim line allows the rider to easily trim while hiked out, maintaining maximum power against the foil/fins.

### SOFT BAR ENDS WITH LEADER LINE ADJUSTMENT

Soft bar ends for comfort and are less likely to damage lightly constructed boards. The leader lines are adjustable via knots inside the float, simply pull out from the opening to access and adjust to your preference.

### STAINLESS STEEL LEADER LINE PIN

Superior strength is achieved with a Stainless pin running through the bar. This creates an ultra strong and direct connection between the control bar to flying lines.

### LIGHT WEIGHT ALUMINIUM CENTRE PIECE

CNC cut Aluminium centre piece reduces weight. The low friction design reduces wear.

### ERGONOMIC EVA GRIP

3D pressed EVA grip with ergonomic shaping provides the ultimate bar grip.

### PU COVERED DE-POWER LINE

The tough PU covered de-power line significantly reduces wear when sheeting in and out.

### STAINLESS STEEL TRIMMER BRACKET

The smooth running trimmer bracket prevents trim line wear.

### CLAMCLEAT TRIMMER

Anodized low abrasion Clamcleat trimmer.

### RE-LAUNCH BALLS

Fixed to the leader lines to pull when re-launching the kite.

### 300KG/200KG FLYING LINES

Colour coded 300kg front / 200kg back lines using the highest quality Dyneema available.
